Docket No.: 0789-0155P

AMENDMENTS TO THE CLAIMS

1. (Currently Amended) An electropositive production well treating fluid, eontaining comprising:

- a) at least [[a]] one cationic fluid loss additive with a content of 0.05-5% by weight;
- b) at least [[a]] one cationic viscosifier with a content of 0.05-5% by weight;

the contents above are both based on total weight of the production well treating fluid;

and the balance is water.

- 2. (Currently Amended) [[A]] <u>The production well treating fluid according to claim 1, which further containing comprises a an electropositive mud-building agent for imparting a positive zeta potential to the production well treating fluid with a content of 0.5-6% by weight.</u>
- 3. (Currently Amended) [[A]] <u>The production well treating fluid according to claim 1 or 2, which further containing comprises</u> an electrical stabilizing agent with a content of 0.1-15% by weight.
- 4. (Currently Amended) [[A]] <u>The production well treating fluid according to claim 1 or</u> 2, which further <u>eontaining comprises</u> at least [[an]] <u>one</u> additive selected from the group

11

Application No. 10/719,235 Amendment dated March 2, 2006

Reply to Office Action of December 2, 2005

consisting of a colloid-stabilizing agent, a lubricant, an oil layer protective agent [[or]] and a weighting agent.

- 5. (Currently Amended) [[A]] The production well treating fluid according to claim 3, which further containing comprises at least [[an]] one additive selected from the group consisting of a colloid-stabilizing agent, a lubricant, an oil layer protective agent [[or]] and a weighting agent.
- 6. (Currently Amended) [[A]] The production well treating fluid according to claim 1, which further containing comprises:
 - electropositive a mud-building agent for imparting a positive zeta c) potential to the production well treating fluid;
 - an electrical stabilizing agent; d)
 - a colloid-stabilizing agent; e)
 - f) a lubricant;
 - an oil layer protective agent; and g)
 - a weighting agent. h)
- 7. (Currently Amended) [[A]] The production well treating fluid according to claim 1, wherein said fluid loss additive is at least one selected from the group consisting of a cationic polymer having low molecular weight, a cationic starch, a cationic modified cellulose, a cationic lignin and a cationic modified lignite.

Application No. 10/719,235 Amendment dated March 2, 2006

Reply to Office Action of December 2, 2005

8. (Currently Amended) [[A]] The production well treating fluid according to claim 1,

Docket No.: 0789-0155P

wherein said viscosifier is at least one selected from the group consisting of an

inorgano-electropositive glue, a black organo-electropositive glue, a cationic guanidine glue gel,

<u>a</u> cationic polyacrylamide and <u>a</u> polyquaternary ammonium salt.

9. (Currently Amended) [[A]] The production well treating fluid according to claim 2,

wherein said electropositive mud building agent for imparting a positive zeta potential to the

production well treating fluid is at least one selected from the group consisting of a clay mineral

which has a zeta potential higher than -10 mv [[or]] and a modified product of said clay mineral.

10. (Currently Amended) [[A]] The production well treating fluid according to claim 3,

wherein said electrical stabilizing agent is at least one selected from the group consisting of an

inorganic salt of iron or aluminum iron, an inorganic salt of aluminum, such as iron chloride,

aluminum chloride, ferric sulfate, aluminum sulfate, hydroxyaluminium hydroxyaluminum and

organic cationic etherifying agent.

11. (Currently Amended) [[A]] The production well treating fluid according to claim 1 or

2, which further containing comprises at least [[an]] one colloid-stabilizing agent with a content

of 0.05-5% by weight therein.

12. (Currently Amended) [[A]] The production well treating fluid according to claim 11,

Docket No.: 0789-0155P

wherein said colloid-stabilizing agent is at least one selected from the group consisting of a

hydroxyethyl cellulose, a biopolymer, a polymeric alcohol and a polysaccharide.

13. (Currently Amended) [[A]] The production well treating fluid according to claim 1 or

2, which has a zeta potential higher than 0 mv.

14. (Currently Amended) [[A]] The production well treating fluid according to elaim 13

claim 1, which has a zeta potential in the range of +10 mv to +60 mv.

15. (Currently Amended) [[A]] The production well treating fluid according to claim 13

claim 1, which has a zeta potential in the range of +21 mv to +29 mv.

16. (Currently Amended) A method of preparing a production well treating fluid

according to any one of claims 1-6 claim 1, which comprises:

mixing at least [[a]] one cationic fluid loss additive, at least a the at least one cationic

viscosifier, and optional electropositive a mud-building agent for imparting a positive zeta

potential to the production well treating fluid, an electrical stabilizing agent, a colloid-stabilizing

agent, a lubricant, an oil layer protective agent, a weighting agent and the water;

wherein the content of the cationic fluid loss additive is 0.05 - 5% by weight; and

14

the content of the cationic viscosifier is 0.05 - 5% by weight, said contents are all based

on total weight of the production well treating fluid.

Docket No.: 0789-0155P

Application No. 10/719,235 Amendment dated March 2, 2006

Reply to Office Action of December 2, 2005

17. (Currently Amended) Use of production well treating fluid according to claim 1 or 2

as a drilling fluid and a well completion fluid in the A process of drilling and well completion,

comprising:

applying the well treating fluid of claim 1 or 2 as a drilling fluid during a drilling

or well completion operation.

18 (New) The production well treating fluid according to claim 10, wherein said

inorganic salt of iron is iron chloride or ferric sulfate, and said inorganic salt of aluminum is

aluminum chloride or aluminum sulfate.
